

Database Design

Ahmed El-Nemr

Why Database Design is Important ?

- It helps produce database systems
 1. That meet the requirements of the users
 2. Have high performance.

Database development life cycle

Requirements analysis

- Planning
 - Planning of entire Database Development Life Cycle.
- System definition
 - Defines the scope and boundaries of the proposed database system.

Database Designing

Logical-Model

Physical-Model

Implementation

- **Data conversion and loading**
- **Testing**

Two Types of Database Techniques

Normalization

ER Modeling

Normalization

Database Normal Forms

FULL NAMES	PHYSICAL ADDRESS	MOVIES RENTED	SALUTATION
Janet Jones	First Street Plot No 4	Pirates of the Caribbean, Clash of the Titans	Ms.
Robert Phil	3 rd Street 34	Forgetting Sarah Marshal, Daddy's Little Girls	Mr.
Robert Phil	5 th Avenue	Clash of the Titans	Mr.

Here you see Movies Rented column has multiple values. Now let's move into 1st Normal Forms:

1NF (First Normal Form) Rules

- Each table cell should contain a single value.
- Each record needs to be unique.

FULL NAMES	PHYSICAL ADDRESS	MOVIES RENTED	SALUTATION
Janet Jones	First Street Plot No 4	Pirates of the Caribbean	Ms.
Janet Jones	First Street Plot No 4	Clash of the Titans	Ms.
Robert Phil	3 rd Street 34	Forgetting Sarah Marshal	Mr.
Robert Phil	3 rd Street 34	Daddy's Little Girls	Mr.
Robert Phil	5 th Avenue	Clash of the Titans	Mr.

What is a Primary KEY?

- A KEY is a value used to identify a record in a table uniquely.

A KEY could be a single column or combination of multiple columns

What is a Primary Key?

-
- A primary key cannot be NULL
 - A primary key value must be unique
 - The primary key values should rarely be changed
 - The primary key must be given a value when a new record is inserted.

What is Composite Key?

- A composite key is a primary key composed of multiple columns used to identify a record uniquely

 **Composite Key**

Robert Phil	3 rd Street 34	Daddy's Little Girls	Mr.
Robert Phil	5 th Avenue	Clash of the Titans	Mr.

Names are common. Hence you need name as well Address to uniquely identify a record.

- In our database, we have two people with the same name Robert Phil, but they live in different places.
- Hence, we require both Full Name and Address to identify a record uniquely. That is a composite key.

2NF (Second Normal Form) Rules

- Rule 1- Be in 1NF
- Rule 2- Single Column Primary Key

FULL NAMES	PHYSICAL ADDRESS	MOVIES RENTED	SALUTATION
Janet Jones	First Street Plot No 4	Pirates of the Caribbean	Ms.
Janet Jones	First Street Plot No 4	Clash of the Titans	Ms.
Robert Phil	3 rd Street 34	Forgetting Sarah Marshal	Mr.
Robert Phil	3 rd Street 34	Daddy's Little Girls	Mr.
Robert Phil	5 th Avenue	Clash of the Titans	Mr.

2NF (Second Normal Form) Rules

MEMBERSHIP ID	FULL NAMES	PHYSICAL ADDRESS	SALUTATION
1	Janet Jones	First Street Plot No 4	Ms.
2	Robert Phil	3 rd Street 34	Mr.
3	Robert Phil	5 th Avenue	Mr.

Table 1

MEMBERSHIP ID	MOVIES RENTED
1	Pirates of the Caribbean
1	Clash of the Titans
2	Forgetting Sarah Marshal
2	Daddy's Little Girls
3	Clash of the Titans

Table 2

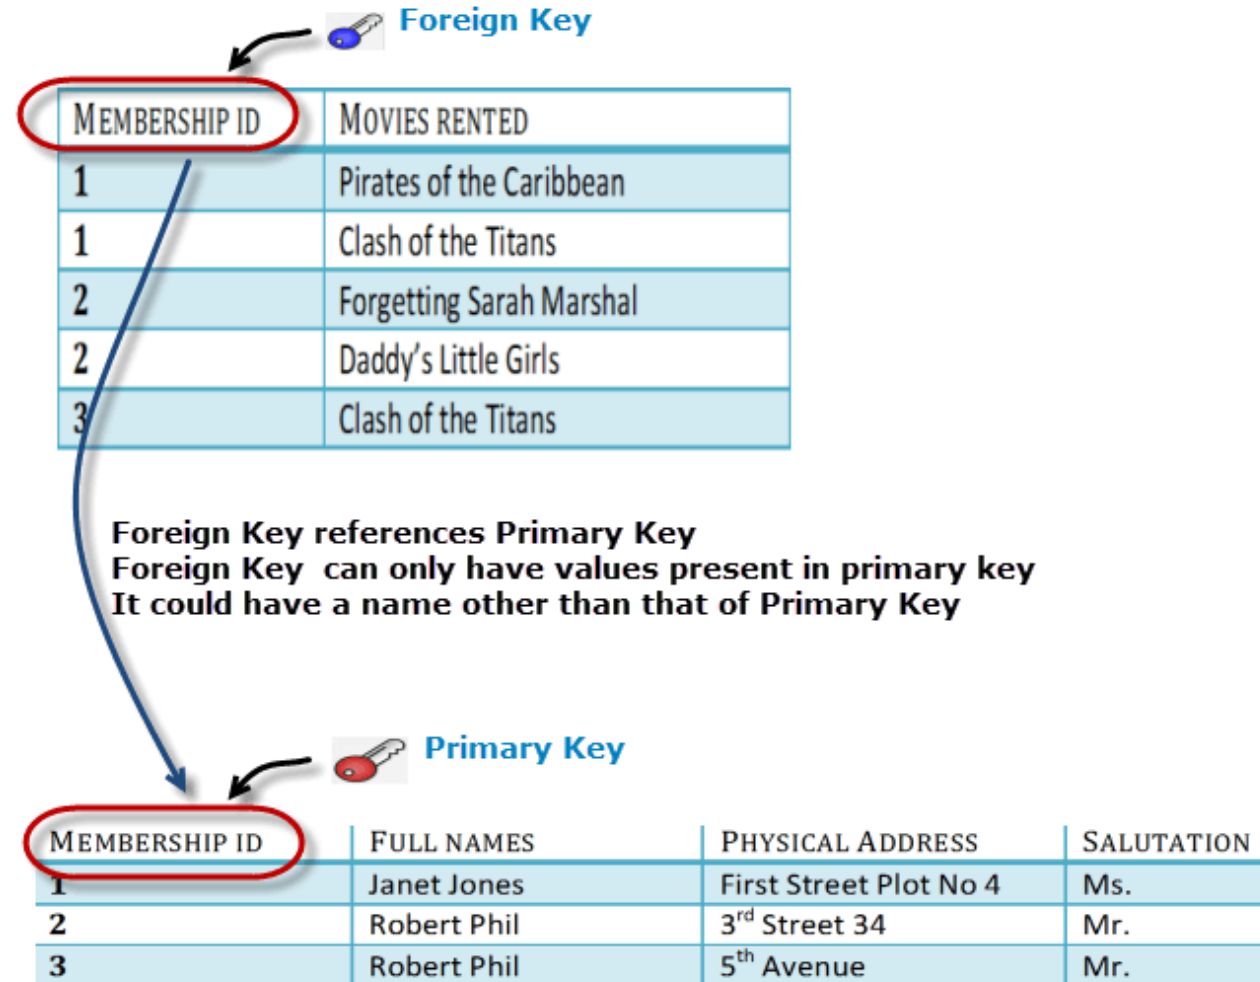

- Rule 1– Be in 1NF
- Rule 2– Single Column Primary Key

Database – Foreign Key

-
- Foreign Key references the primary key of another Table! It helps connect your Tables
 - A foreign key can have a different name from its primary key
 - It ensures rows in one table have corresponding rows in another
 - Unlike the Primary key, they do not have to be unique. Most often they aren't
 - Foreign keys can be null even though primary keys can not

Database – Foreign Key

What are functional dependencies?

- When changing a non-key column, might cause any of the other non-key columns to change

MEMBERSHIP ID	FULL NAMES	PHYSICAL ADDRESS	SALUTATION
1	Janet Jones	First Street Plot No 4	Ms.
2	Robert Phil	3 rd Street 34	Mr.
3	Robert Phil	5 th Avenue	Mr.

Change in Name (under row 3, column 2) → *May Change Salutation* (under row 3, column 4)

Changing the non-key column Full Name may change Salutation.

3NF (Third Normal Form) Rules

- Rule 1- Be in 2NF
- Rule 2- Has no transitive functional dependencies

To move our 2NF table into 3NF, we again need to again divide our table.

MEMBERSHIP ID	FULL NAMES	PHYSICAL ADDRESS	SALUTATION ID
1	Janet Jones	First Street Plot No 4	2
2	Robert Phil	3 rd Street 34	1
3	Robert Phil	5 th Avenue	1

MEMBERSHIP ID	MOVIES RENTED
1	Pirates of the Caribbean
1	Clash of the Titans
2	Forgetting Sarah Marshal
2	Daddy's Little Girls
3	Clash of the Titans

SALUTATION ID	SALUTATION
1	Mr.
2	Ms.
3	Mrs.
4	Dr.

Summary

-
- Database designing is critical to the successful implementation of a database management system that meets the data requirements of an enterprise system.
 - Normalization Process in DBMS helps produce database systems that are cost-effective and have better security models.
 - Functional dependencies are a very important component of the normalize data process
 - Most database systems are normalized database up to the third normal forms.
 - A primary key uniquely identifies a record in a Table and cannot be null
 - A foreign key helps connect table and references a primary key
